
Using the Zimbra Collaboration Suite Import Wizard for Outlook

You can use Zimbra Collaboration Suite (ZCS) Import Wizard for Outlook to import your Microsoft® Outlook® personal folders (.pst) files to the Zimbra server.

When you import your email messages, attachments, calendar, contact lists, tasks, and personal distribution lists to the Zimbra server, your Outlook folder hierarchy is maintained. If you assigned categories to your messages and contacts, these are converted to tags in your Zimbra mailbox.

Your archived .pst files can also be imported. You must run the ZCS Import Wizard for Outlook for each .pst file you are importing. If you have a large number of archived or additional .pst files to import, talk to your administrator.

Your administrator will give you the following information which you will need to import your .pst files:

- **Hostname.** The Zimbra server domain name (DNS).
- **Port.** The port number for the server. Usually 80 is the port number for non-secure connections, and 443 is the port number for secure connections.
- **Use Secure Connection.** Check this box, only if your administrator instructs you to.
- **User name.** Your Zimbra account email address. The address should be entered as **name@domain.com**.
- **Password.** Your Zimbra account password.

Once you have the above information, and the .pst files that you are going to import, you are ready to begin. Use the following steps to import your .pst files with the ZCS Import Wizard for Outlook.

To use the ZCS Import Wizard for Outlook

1. Open the ZCS Import Wizard for Outlook. The first field window will give you basic information about the Import Wizard for Outlook. Click **Next** to go to the Import Destination Window.
2. **Import Destination.** Enter the information that your administrator has given you in each of the following fields. When you are finished, click **Next**.

- **Hostname.** The Zimbra server domain name (DNS).
- **Port.** The port number for the server. Usually 80 is the port number for non-secure connections, and 443 is the port number for secure connections.
- **Use Secure Connection.** Check this box, only if your administrator instructs you to.
- **User name.** Your Zimbra account email address. The address should be entered as **name@domain.com**.
- **Password.** Your Zimbra account password.

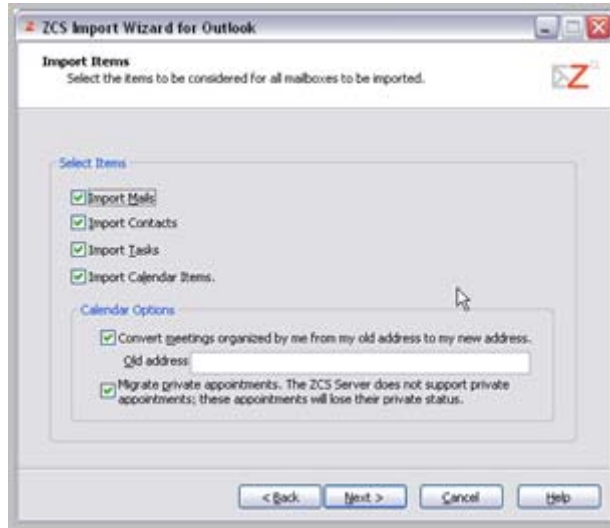

3. **Import PST.** Select your .pst file to import. You can click **Browse** to locate the file.

The main .pst file is usually in the Microsoft Outlook folder in the Local Settings/Application Data directory. To find your .pst files, open Outlook click **Files>Open>Outlook Data Files**. Use the **Look in** drop down arrow to see the file name and path for your .pst file. You can also go to **File>Data File Management** to see a complete list of all .pst files for the current profile and the paths of those .pst files. You can also use your computer's Search feature to find .pst files on your computer.

Once you've selected the .pst file to import, click **Next**. If you have protected your .pst with a password, you must enter your password to continue.

4. **Import Items.** Select which items in the .pst file to import, and select calendar options. The item options are as follows:
 - **Import Items.** Select whether or not to import Mail, Contacts, Tasks, and Calendar Items.
 - **Calendar Options.** Choose if you want to:

- **Convert meetings.** This converts meetings organized under your old email address to your new email address. Provide your old email address in the field provided, if you select this option.
- **Migrate private appointments.** This migrates any private appointments. The ZCS server does not support private appointments; if you choose to migrate your private appointments, these appointments will become public.

When you are finished selecting your import items, click **Next**.

5. **Import Options.** Set import options for which messages to import. The import options are as follows:
 - **Folder options.** Select whether to import your Junk-Mail folder and Deleted Items folder
 - **Progress Logs.** Select whether to ignore previously imported items. If you do not check this box, you will have duplicates of any previously imported items in their ZCS account.
 - **Date Filter.** Select whether to import items received after a specific date. If you do not select to filter items by date, all items will be imported.
 - **Import Message without Body** enables messages that do not include the body of the message to be imported. If you configured your IMAP to download only the header and to ask before downloading the body, this option will import any emails that you have not downloaded the body to yet. If you do not check Import Message without Body, messages with only the header information are not imported.

When you are finished selecting your import options, click **Next**. A Begin Import Process? window will appear.

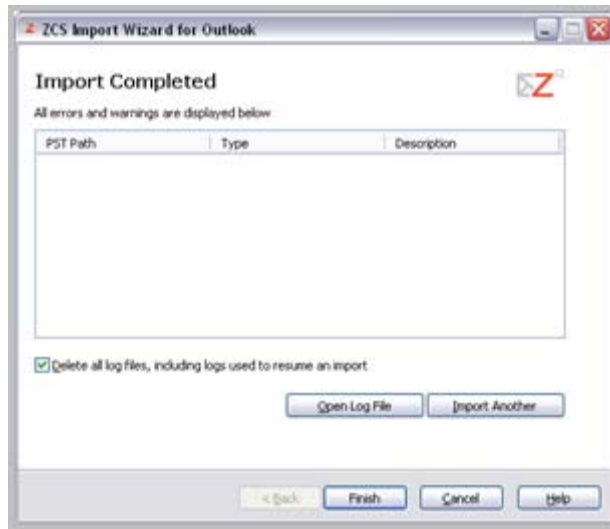

6. Click **OK** in the Begin Import Process? dialog. The ZCS Import Wizard will begin importing your .pst file.

If you have Outlook running, you will be prompted to close it. During the import of your pst file, if the Import Wizard detects that some messages need addresses from Active Directory, you are prompted for information to connect to Active Directory. Enter the following information. If you do not know what to enter, ask your system administrator.

- Your Active Directory server name, enter as **activedirectory.company.com**
- Your Windows user name and password.

Note: If you are prompted to log on to your Active Directory while importing files and you do not connect, some of the imported messages will have blank **From** and/or **To** headers.

When your import is finished, a Import Completed message will be displayed, showing the total errors and total warnings for your import. Click **OK**. The Import Completed dialog will appear.

7. Review your import in the Import Completed dialog.

Any errors or warnings generated during the import process are displayed on the **Import Complete** dialog box. You should review the information on this page. If you need more information click the **Open Log File** button and search the log for details.

Note: Don't close the ZCS Import Wizard until you reviewed the log. If you close the ZCS Import Wizard while the **Delete all log files** box is checked, you will not be able to view the logs at a later time.

If you find that you need to import the .pst file again, you should check **Ignore previously imported items** on the Import Options dialog so that messages and contacts that have been imported are not imported again.

8. If you want to import another .pst file, click **Import Another**. If you want to wait until a later time to import your additional .pst files, you can run the ZCS Import Wizard another time. If you have a large number of .pst files to import, talk to your administrator.

9. If you are finished importing your .pst files, click **Finish**.

You have now finished importing your .pst files to your Zimbra account.

Note: The following Outlook types are not imported:

- Notes
- Rules and alerts
- Journal
- Files you may have created in Outlook
- Contacts listed without a complete email address in Personal Distribution lists.
