Release Notes

Zimbra™ Collaboration Suite

Release Overview

This release note refers to the *Zimbra Collaboration Suite 3.0 Beta2* release from Zimbra. This release is intended to provide a basis for customers to trial the software and understand its end user and administration features. This release has been through early testing and quality cycles, but it has known outstanding issues and is therefore still considered a Beta-quality release.

Features Included

The *Zimbra Collaboration Suite 3.0 Beta2* is a next generation collaboration solution. It provides email, contacts and group calendaring functionality, along with rich, browser-based interfaces for both end users and administrators. A comprehensive feature list is available on the Zimbra web site at www.zimbra.com.

The *Zimbra Collaboration Suite Beta* also includes the following open source components:

- Postfix
- Apache Jakarta Tomcat
- OpenLDAP® software
- MySQL® software
- Apache Lucene search engine library
- James filter

Production Documentation

Zimbra documentation includes an Administrator's Guide, Quick Start Installation Guide for single server installations, Multi-Server Installation Guide, and a Zimbra Migration Wizard Guide to migrate accounts from Exchange to the Zimbra server. These are in PDF format.

Online help is available on the administration console and on the Zimbra Web client.

Known Issues

Zimbra engineering has identified a number of issues with the software, and we are actively working to resolve them. Following are the ones that are most likely to occur. All known bugs are listed in Zimbra's Bugzilla database, which will soon be available on the Zimbra web site, at www.zimbra.com.

Issue #	Summary
Zimbra Web Client Issues	
	If you use Firefox as your browser, known Firefox issues can affect how the Zimbra administration console and Zimbra Web Client work.
	When you get a Firefox error, try reloading the browser to continue.
	Note: Zimbra does not support Firefox 1.5.
	Known issues with Firefox include 509, 943, 3812, 2939, 3812, 4020, 4455
442	Cannot scroll the message content with the scroll wheel.
509	If you use the Firefox browser, the cursor position may not be visible in the text boxes, and you have no visual feedback to continue to enter text.
	Even though you cannot see the cursor, type in the boxes as normal.
943	When composing a message, tabbing from one field to the next does not work correctly.
2939	If you use the Firefox browser and resize the browser to be smaller when you are in the Zimbra Web Client, the Zimbra user interface does not resize correctly.
	Work Around Reload the Zimbra Web Client. The vertical bar displays on the left and the text of messages wrap correctly.
3812	Sometimes when you open a new message in Firefox, the right-click Copy or the Control-C function does not work.
	Work around is to click Reply or Forward. The text in the message can then be copied.
4020	Sometimes you cannot copy HTML formatted messages. This is intermittent.
4455	While composing in HTML format, if you move out of the compose body, to do something else, such as add a cc:, you may not be able to click back into the body of the message.
1919	You may occasionally get an ambiguous error message. This is usually a

2

Issue #	Summary
	network error.
	Reload the browser to continue.
2723, 3062, 3363	There are known issues with creating filters in Zimbra Web Client. When you try to create a filter, the options you select may not be retained.
2836	In some clients, search folders in IMAP are read-only.
2886	When you select to show external images in an HTML message, if the image is too tall, you can't scroll the whole message. This has to do with the browsers timing out before the message is loaded.
	Workaround is to close the message and re-open it again. Because the message is loaded from the cache, it opens before the timeout.
3972	While in conversation view, if you put your Sent folder in your Inbox folder, you cannot move messages you sent to other folders.
	Workaround, is to not include your Sent folder under your Inbox folder.
4165 **4166**	Some error messages are misleading and ask you to send a report to Zimbra. Please do not send reports about the following types of errors.
	When you enter an incorrect email address, the error message that is returned states that it is a server problem and shows Send Report.
	Search Query error message shows Sent Report.
4206	Sometimes when logging in is not successful and know you entered the correct name and password, you get an error message. This is a server problem.
	Reload the browser to continue.
4418	Sometimes the Free/Busy All Attendees row (the top row) in Calendar does not sum all the attendees data correctly.
4484	Occastionally, when you accept an appointment and your session has timed out, when you log back in, the Overview panel is blank.
	Reload the browser and relog in.
	The following issues affect COS
4508	In COS, disabling Saved Searches does not remove the Save Search folder in the Overview pane.
4516	In COS, disabling Tags does not remove Tags from the Overview pane.
4517	In COS, disabling Adanced Search disables the Advanced Search feature and the Search Save button.
4519	In COS, disabling HTML Compose does not disable this feature.
4595	When viewing contacts in the Detailed Card view, and then open the

Issue #	Summary
	Compose window, the contact card remains open and moves along with the mouse until clicked on the compose window.
	Reload the browser.
3448	If you are using Thunderbird through IMAP as your email client to the Zimbra server, you may receive chronic popups notifying you of "x new messages" that are incorrect. When you look at your messages, you may not have any new messages at all.

Administration Issues

Issue #	Summary
4582	Using FireFox, you can select the first account and View Mail, but when you select another account to View Mail, the first account is still open.
	You will need to close the View Mail window before opening another.
1363	When using the Zimbra Migration Wizard to import messages and attachments, any attachments larger than 5MB cannot be imported. Message attachments that are too large are replaced with a small text/plain attachment indicating that the attachment was too large.
	No workaround.
